Background on RNA-seq

DNA

ACTGACCTAGATCAGTGTAGCGATCGTATACGAGACCGATTTCATCGGCAT

transcription

RNA

AUCAGUCGAUCACCGAU

translation

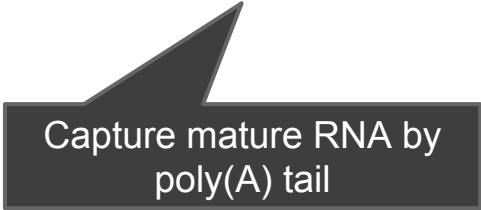

protein

Fragmented RNA
molecule

AUGGGAAUUCACGAAUUCUAGAAAAAA

AUGGGAAUUCACGAAUUCUAGAAAAAAA

Capture mature RNA by
poly(A) tail

AUGGGAUUCACGAAUUCUAGAAAAAAAAA

ATGGGAATTCACGAATTCCTAG

Reverse transcribe into
complementary DNA
(cDNA)

AUGGGAUUCACGAAUUCCUAGAAAAAAAAA

ATGGGAATTCACGAATTCCTAG

Steps

1. Align
2. Count, assemble, quantify
3. Normalize
4. Statistical tests
5. Gene set enrichment

Step 1: Align

Software:

- [HiSat](#)
- [Rail](#)
- [Star](#)
- [Tophat2](#)

Genome

Step 2: Count

Software:

- [HTSeq](#)
- [featureCounts](#)
- [kallisto](#) (no alignment)
- [derfinder](#)

Genome

Step 2: Assemble and quantify

Software:

- [StringTie](#)
- [Cufflinks](#)
- [Trinity](#)
- [RSEM](#)

Genome

expression ≈ 12 for both
assembled transcripts

Estimated
Transcripts

Step 3: Normalize

Software Normalize:

- [EDAseq](#)
- [cqn](#)
- [DESeq2/edgeR](#)
- [Ballgown](#)
- [derfinder](#)

Software Batch Effects:

- [sva](#)
- [RUVseq](#)

Genome

**expression ≈ 12 for both
assembled transcripts**

Estimated
Transcripts

Step 4: Statistical tests

Software:

- [DESeq2/edgeR](#)
- [Ballgown](#)
- [derfinder](#)

Genome

**expression ≈ 12 for both
assembled transcripts**

Estimated
Transcripts

Step 5: Gene set enrichment

Software:

- [goseq](#)
- [SeqGSEA](#)

- Gene In A Relevant Set
- Gene Not In The Set
